(All amounts expressed in US dollars, unless otherwise stated)

Vancouver, May 30, 2019 -- Atico Mining Corporation (the “Company” or “Atico”) (TSX.V: ATY | OTC: ATCMF) today announced its financial results for the three months ended March 31, 2019, posting income from mining operations of \$5.7 million and a net income of \$2.7 million.

Fernando E. Ganoza, CEO and Director, commented, “During the quarter we underwent a union negotiation which resulted in a strike significantly impacting our results for the period. This event negatively affected our production results while the impact on financial results was offset by strong sales of inventory carried forward from the previous year,” said Fernando E. Ganoza, CEO. “The Company has provided adjusted guidance for the remainder of the year and will focus on minimizing loss of production by this event.”

First Quarter Financial Highlights

- Net income for the three months ended March 31, 2019 amounted to \$2.7 million, compared with \$0.4 million for the same period last year (“Q1-2018”). El Roble Mine

The El Roble mine is a high grade, underground copper and gold mine with nominal processing plant capacity of 850 tonnes per day, located in the Department of Choco in Colombia. Its commercial product is a copper-gold concentrate.

Since obtaining control of the mine on November 22, 2013, Atico has upgraded the operation from a historical nominal capacity of 400 tonnes per day.

El Roble has Proven and Probable reserves of 1.47 million tonnes grading 3.40% copper and 1.88 g/t gold, at a cut-off grade of 1.93% copper equivalent as of June 30, 2018. Mineralization is open at depth and along strike and the Company plans to further test the limits of the deposit.

On the larger land package, the Company has identified a prospective stratigraphic contact between volcanic rocks and black and grey pelagic sediments and cherts that has been traced by Atico geologists for ten kilometers. This contact has been determined to be an important control on volcanogenic massive sulfide (“VMS”) mineralization on which Atico has identified numerous target areas prospective for VMS type mineralization occurrence, which is the focus of the current surface drill program at El Roble.
