

## **Atico Produces 3.16 Million Pounds of Cu and 2,116 Ounces of Au in Second Quarter 2019**

Vancouver, July 22, 2019 -- Atico Mining Corporation (the “Company” or “Atico”) (TSX.V: ATY | OTC: ATCMF) announces its operating results for the three months ended June 30, 2019 from its El Roble mine. Production for the quarter totaled 3.16 million pounds of copper and 2,116 ounces of gold in concentrates, a decrease of 40% for copper and 18% for gold, respectively, over the same period in 2018.

“During the second quarter, the effects of the El Roble mine strike were evident in our results as they continued to limit our ability to reach operational objectives for the quarter,” said Fernando E. Ganoza, CEO. “Now that the operation is back to steady state levels, we will strive to achieve our adjusted guidance for the year as we continue our aggressive drill campaign on the 6,300-ha land package.”

### ***Second Quarter Operational Highlights***

- Production of 3.16 million pounds of copper contained in concentrates; a decrease of 40% over Q2 2018.
- Production of 2,116 ounces of gold contained in concentrates; a decrease of 18% over Q2 2018.
- Average processed tonnes per day of 839, an increase of 6% over Q2 2018.
- Copper head grade of 3.28%, a decrease of 13% over Q2 2018.
- Gold head grade of 2.34 grams per tonne; an increase of 16% over Q2 2018.
- Copper and gold recovery of 91.7% and 58.4%; a decrease of 2% for both copper and gold over Q2 2018.

### ***El Roble Mine***

The El Roble mine is a high grade, underground copper and gold mine with nominal processing plant capacity of 850 tonnes per day, located in the Department of Choco in Colombia. Its commercial product is a copper-gold concentrate. Since obtaining control of the mine on November 22, 2013, Atico has upgraded the operation from a historical nominal capacity of 400 tonnes per day.

El Roble has Proven and Probable reserves of 1.47 million tonnes grading 3.40% copper and 1.88 g/t gold, at a cut-off grade of 1.93% copper equivalent as of June 30, 2018. Mineralization is open at depth and along strike and the Company plans to further test the limits of the deposit.

On the larger land package, the Company has identified a prospective stratigraphic contact between volcanic rocks and black and grey pelagic sediments and cherts that has been traced by Atico geologists for ten kilometers. This contact has been determined to be an important control on VMS mineralization on which Atico has identified numerous target areas prospective for VMS type mineralization occurrence, which is the focus of the current surface drill program at El Roble.
